

Green India Champion Agro
Spirit of Innovation
 (An ISO 9001:2008 Certified Company)

About Us

Green India Champion Agro promises to deliver quality, innovative products, equipment, and services in an Innovative and affordable packages direct to our farmers and customers. Our product and service include horticulture plants, Farm Forestry Plants, ornamental plants, organic Agri Inputs, Vermibed, Health supplement, Farm development, Agriculture Consultancy, Landscaping and much more. GICA Helping farming families increase production in a sustainable way, and sell more crops, is the most effective way. For over Two and half years Green India Champion Agro private limited has served the green industry in Maharashtra , Madhya Pradesh, Chhattisgarh and Rajasthan with a passion for growing along with our customers . Today and tomorrow, we're here to help make your operation cost effective and timely with friendly, responsive staff, and a sales team brimming with industry experience.

Tissue Culture Teak Plant (Sagwan)

Teak wood known as king of timber belongs to the family Verbenaceae. It's scientific name is [Tectonagrandis](#). It grows as a huge tree and yields excellent quality wood. Therefore teak wood has higher demand in national as well as International markets. Articles made of teak wood have high durability/quality and hence with the increased consumption of teak in household and office interiors, teak has become an indispensable part of people's lives all over the world. Normally superior teak plants are grown on commercial scale, it is possible to earn good profit with low risk. When grown on fertile soils with irrigation and scientific management, each tree yields 10 to15 Cu. ft wood in about 14 years. The main stem grows to a height of 25-30 ft. and attains a girth of 35-45 inches.

Economy	Products & Uses
800 plants per Acre (9*6 feet)	Teak plants are useful in making the wood product.
After 10 to 12 Years Per Plant 15-20 Cu. ft. Market Price 1000/- To 2000/- per Cubic feet.	Teak is used extensively in India to make doors and window frames , furniture , and columns and beams in homes.
Production:- 15 Cubic feet * 1000/- = 15000/- per plant For 1 Acre :- 800 Plants * 15000/- = 12000000/-	It is also used for cutting boards , indoor flooring , countertops and as a veneer for indoor finishings.
10 To 12 Years Onwards only maintenance and cutting cost 300000/- + 200000/- = 500000/- (other expenses is not included)	Leaves of the teak wood tree are used in making Pellakai gatti (jackfruit dumpling), where batter is poured into a teak leaf and is steamed. This type of usage is found in the coastal district of Udupi in the Tulunadu region in South India

So that approximate profit around 1100000/- Rs per acre up to 10 - 12 years	Teak has the unusual properties of being both an excellent structural timber for framing, planking, etc.
